

Syllabus:

- Assignment no. 1 covers all topics/content up to week # 3.

Objectives of Assignment:

- Gain proficiency in using CSS selectors and CSS Cascading

Uploading instructions:

- Your assignment must be in .rar or zip format no other file types will be accepted.
- No assignment will be accepted through email.

Rules for Marking:

It should be clear that your assignment will not get any credit if:

- The assignment is submitted after due date.
- The submitted assignment does not open or file is corrupted.
- Your assignment is copied from internet, handouts or from any other student (Strict disciplinary action will be taken in this case).

For Any Query related to assignment send email at cs511@vu.edu.pk.

Scenario:

You are a web designer creating your **personal portfolio webpage**. The page should include a short introduction, a skills section, a project list, and a contact form. You will use various CSS selectors and demonstrate the concept of cascading to style your webpage effectively.

Requirements:

1. Element, Class, and ID Selectors (5 marks)

- Use element selectors to style headings and paragraphs.
- Use class selectors for skill items or project cards.
- Use an ID selector to style the main introduction section.

2. Attribute Selectors (3 marks)

- Style input fields using attribute selectors (e.g., `input[type="email"]`, `input[type="text"]`).
- Style links that open in a new tab (`a[target="_blank"]`).

3. Pseudo Selectors (4 marks)

- Add hover effects to buttons or links (`:hover`).
- Style the first project differently using `:first-child` or `:nth-child`.
- Use a pseudo-element like `::before` to add a decorative line before section headings.

4. Contextual Selectors (4 marks)

- Use descendant or child selectors to style items inside a specific section (e.g., `.projects li` or `.skills > li`).
- Differentiate sibling elements using adjacent or general sibling selectors.

5. CSS Cascading (4 marks)

- Demonstrate cascading priority by applying multiple styles to the same element (e.g., color set by element, overridden by class, then by ID).
- Add comments in CSS explaining which rule takes precedence.

Sample Webpage Design:

You should design your web page like below:

You can change colours according to your choice but structure should remain same.

Welcome to My Portfolio

Hi! I'm **Bilal**, a passionate web designer who loves crafting beautiful and responsive websites.
