Solution:

a. Error:

The programmer made a **coding mistake** by typing “5” instead of “50” for the cost of each extra parking hour.

b. Fault:

The **wrong rule or formula** used inside the app was:

Total cost = $100 + (\text{extra hours} \times 5)$

instead of the correct formula

Total cost = $100 + (\text{extra hours} \times 50)$.

c. Failure:

Because of that fault, the app charged users the wrong amount.

For example, people who parked for 3 hours were charged **110 rupees** instead of **200 rupees**.

d. Defect:

The city was unhappy because the **app caused financial loss** — it **undercharged users**, leading to **loss of revenue** and **customer complaints** after release.
